

## Diabetes – Age-Adjusted Rate

### Rate of Hospitalization From or With Diabetes, Per 100,000 Population

**This Indicator Measures...** the total annual rate of hospitalizations due to diabetes and/or persons who have diabetes per 100,000 population taking age distribution into consideration in Flagler and Volusia Counties.

**This is Important Because...** managing diabetes effectively can help reduce and/or prevent many health problems associated with the disease.

Source: FLHealthCHARTS

Note: The Flagler County rate increased each year of the reporting period. The Volusia County rate fluctuated and increased over the reporting period.

## HIV Cases

### Rate of New HIV Cases, Per 100,000 Population

**This Indicator Measures...** the total annual rate of new HIV (Human Immunodeficiency Virus) Cases per 100,000 population in Flagler and Volusia Counties.

**This is Important Because...** HIV is preventable and has a significant impact on the physical, emotional and fiscal health of the affected person as well as placing others in the community at risk of infection.

Source: FLHealthCHARTS

Note: The Flagler fluctuation is due to very low numbers. The Flagler rate increased over the reporting period. The Volusia rate increased each year reported until 2015 when it decreased.

## Sexually Transmitted Diseases

### Rate of Total Gonorrhea, Chlamydia & Infectious Syphilis, Per 100,000 Population

**This Indicator Measures...** the total annual incidence of gonorrhea, Chlamydia & infectious syphilis as a rate per 100,000 population in Flagler and Volusia Counties.

**This is Important Because...** sexually transmitted diseases are preventable and affect the overall health of the affected individual as well as place others in the community at risk of infection.

Source: FLHealthCHARTS

Note: The Flagler County and Volusia County rates have fluctuated over the reporting period and increased overall.
